## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, 14-39, drawn to method of manufacturing multiple metal levels separated by insulating layer, classified in class 438, subclass 622.
- II. Claims 10-13, 40-46, drawn to multiple level metallization for integrated circuit, classified in class 257, subclass 758.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case in claim 10, lines 4-5, "an inorganic layer covering the wire and having a contact hole exposing the wire" may be made by depositing a material without a thermal anneal and not using claim 1, lines 4-5, "depositing an inorganic insulation layer covering the wire; executing a thermal treatment process".

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
